52. CONSTRUCTION SITE UNITS

MODERN CONSTRUCTION SITE UNITS

Renta's construction site units are consistently uniform. Our site units are bright, spacious, and designed for construction site conditions. These facilities are manufactured in-house, enabling us to guarantee consistent quality across all site unit solutions. We leverage modern technology and a contemporary look in our construction site units.

DESIGNED FOR THE CONSTRUCTION SITE

We have developed construction site units and furniture in collaboration with our clients. Functional and visually appealing construction site spaces provide a professional image of the site for both our partners and our own staff.

SITE UNITS FOR VERSATILE USE

Our construction site units can also be utilized as office units at trade shows and events, as well as in special cases. Our units have been used as exhibition booths, pop-up stores, lunch restaurants, cafes, museums, and information points.

Renta's advanced construction site spaces have even been installed in an ice castle, so the possibilities are limitless!

TURNKEY CONSTRUCTION SITE UNITS

With Renta's services, you get everything you need for your construction unit from one source. We provide installation and transportation services, HVAC solutions, and telecommunications connections.

Renta's construction site unit services enable smooth and uninterrupted operations at the worksite.

DESIGN

Construction site units are always customized to meet the client's needs. All spaces can be tailored according to the client's preferences. Clients and their needs vary, so good design and adaptable spaces facilitate success in all phases of the project.

Renta Modules, the tool for designing construction site units, allows exploring these spaces in a 3D environment before their delivery. Modules make it easier for the client to assess the functionality of the plans. The program enables the examination of various spatial changes and presenting finalized spaces during the planning phase.

INSTALLATION

Construction site units are delivered according to schedule, and our skilled installers ensure that the units are fully functional upon handover to the client.

The units can be delivered to the site either as they are or fully installed. We are also capable of handling electrical and HVAC work for the construction site units.

FACADE SERVICES

Is your site located in a public area where the construction site unit needs to meet specific aesthetic standards? No worries, we have a solution! The facade of the construction site unit can be enhanced with various panels, fabrics, and decals. You can design the pattern yourself or request a quote from us.

Our construction site units have been used as museums, cafes, restaurants, and testing stations, among other purposes.

MAINTENANCE SERVICES

Functional construction site units require various appropriate maintenance services regularly. We aim to ensure that our clients have functional and safe working conditions.

The furniture solutions in the units are flexible and can be modified as the project progresses. As the project evolves, the client's needs might change, and then the units can be adapted with furniture adjustments alone.

HVAC

Upon the client's request, the construction site units can be delivered as a ready-to-use package, including HVAC solutions. This enables the site's staff to focus entirely on their core responsibilities. This is always discussed with the client on a case-by-case basis.

EXIT PLANS AND SIGNAGE

Safety is crucial when working in construction site units. If desired, we can create evacuation plans and install visible exit signs and emergency exit signs. A safe construction site also includes the necessary number of fire alarms and firefighting equipment.

ACCESS CONTROL AND SMART LOCKS

Construction site units can be equipped with modern access control devices and smart locks. Managing access to the construction site becomes easier and safer when you know who is on-site, and unauthorized individuals are prevented from entering the premises.

TELECOMMUNICATION CONNECTIONS

We are capable of implementing ready-made IT and telecommunication solutions for your construction site units. In practice, the construction site space can offer the same features as an office, allowing tasks to be carried out without unnecessary transitions between different points. With a pre-built service, the site's workers can focus on their tasks right from the start, enabling them to perform at their best.

Through us, you can obtain an internet connection suitable for your needs through a WLAN network. Depending on the location and the overall setup, we can establish a fixed fiber optic connection or a 5G network.

Through these network connections, we can create automatic notifications that enhance the usability and safety of the construction site units.

Using the network connections, the construction site units can be equipped with firewalls, information displays, remotely monitored smart locks, access control systems, burglary alarm systems, and fire detectors.

OFFICE FURNITURE

OFFICE DESK, FOLDING LEGS, ELECTRIC

ELECTRICALLY ADJUSTABLE OFFICE DESK.
